ISWARYA S

Senior DevOps Engineer

Chennai, India | +91 98943 69486 | iswaryasuresh2001@gmail.com | LinkedIn

---

Professional Summary

Results-driven DevOps Engineer with **4 years of experience** (including 6 months of internship) in automating CI/CD pipelines, container orchestration, and cloud infrastructure. Expertise in AWS, Docker, Terraform, and Jenkins to drive scalable, secure deployments. Proven track record in cost optimization (50%+ savings) and innovation, including leading an award-winning project at the India DevOps Hackathon. Passionate about enhancing system reliability, reducing deployment times by 90%, and fostering cross-team collaboration in fast-paced environments.

Professional Experience

Senior DevOps Engineer

Applied Data Finance, Velachery, Chennai, *June 2022 – Present*

ADF-Devbox: Award-Winning Scalable Dev Environment Automation
(India DevOps Hackathon Winner, Bangalore – 1st Place)

- **Led Implementation of Spot Instance-Based Unified Test Environment:** Designed and automated a single-instance "ADF-Devbox" setup using Terraform, Jenkins, Ansible, and Python to containerize 20+ core applications; enabled on-demand launches via Jenkins jobs with app selection options, solving resource contention and manual setup delays—scaled from 40–60 static instances to 1000+ spot instances/month, reducing time-to-market by 90% (setup in ~20 mins vs. 1+ days).
- **Optimized for Cost and Reliability with Strategic Spot Management:** Integrated AWS Spot Instance Advisor for low-interruption bidding (10–15% premium), multi-AZ failover, and auto-stop/terminate scripts post-business hours; mounted EFS/EBS data to on-demand backups during interruptions—achieved ~50% monthly cost savings (e.g., $4,655 static vs. $2,200–$2,700 spot avg.) over 1+ year, monitored via Datadog.
- **Enhanced Security and DevSecOps Integration:** Enforced VPN-only access, NAT Gateway outbound routing, and domain segregation; automated AMI patching using AWS Image Builder and CI pipelines with GitLeaks, Anchore, SAST/DAST scans—boosted AWS Security Hub compliance to 100% for container images in ECR.

Containerization and Deployment

- **Containerized Python and Java Applications for Production:** Dockerized multiple internal applications and deployed via Docker in non-prod/prod environments with fine-tuned pipelines and optimized base images—reducing deployment failures and ensuring repeatability.
- **Automated Docker Image Management:** Built custom Docker base images for Python/Java/Golang apps; automated image patching, OS upgrades, and promotion between non-prod and prod ECR repositories—ensuring secure, compliant image pipelines.
- **Implemented PDSCAN for Data Security:** Rolled out PDSCAN across all production servers and ECS environments to detect sensitive PII data—strengthening compliance and risk mitigation.

Orchestration and Infrastructure as Code (IaC)

- **Automated AWS ECS Cluster Provisioning:** Built complete ECS clusters using Terraform, with reusable modules for CI SPOT instances and ASG scaling; enabled blue-green deployments with rollback and self-healing mechanisms.
- **ECS Autoscaling and Capacity Optimization:** Configured autoscaling for key ECS services with zero-downtime deployments and efficient scaling under varying workloads.
- **AMI Automation:** Automated AMI creation for all environments via EC2 Image Builder, streamlining quarterly patching and ensuring consistency across environments.

CI/CD & DevSecOps Pipelines

- **Developed and Maintained CI/CD Pipelines:** Built and managed multiple Jenkins pipelines across projects for Docker and ECS applications, integrating security scanning, deployment validation, and environment promotion stages.
- **Implemented Full DevSecOps Pipeline:** Integrated SAST, DAST, and dependency scanning into CI/CD flows, improving code security and reducing vulnerabilities before deployment.
- **Configured Blue-Green and Rolling Deployment Strategies:** Set up ECS blue-green and rolling updates with automated rollback support, reducing downtime and deployment risks.

Automation & Process Optimization

- **Automated Day-to-Day DevOps Operations:** Designed Python/Bash automation scripts for environment cleanup, instance management, log rotation, cron setup, and monitoring—saving hours of manual effort weekly.
- **Infrastructure & Process Automation Expert:** Known for end-to-end DevOps automation—from infrastructure provisioning to CI/CD flows and cloud security enforcement—resulting in faster releases and consistent environments.

Monitoring, Logging, and Troubleshooting

- **ELK Stack and Datadog Monitoring:** Deployed ELK stack for multiple applications; configured dashboards and alerts for ECS, EC2, and service metrics in Datadog, ensuring proactive monitoring and issue detection.
- **Improved Operational Visibility:** Automated alert tuning, log aggregation, and ECS container health tracking—minimizing false positives and ensuring high availability.

DevOps Engineer Intern

Applied Data Finance, Velachery, Chennai, *January 2022 – June 2022*

- Acquired expertise in Docker, Jenkins (CI/CD), and automation tools; integrated into Python/Java apps—accelerated application deployments and reduced manual efforts.
- Implemented PDSCAN on production servers to scan for sensitive PII data—enhanced data security and compliance.

Software Engineer Intern

Applied Data Finance, Velachery, Chennai, *June 2021 – December 2021*

- Improved code quality through unit testing with JUnit and Mockito—achieved comprehensive coverage of code paths and edge cases, ensuring reliability.

Education

Bachelor of Technology in Information Technology

Sri Krishna College of Engineering and Technology, Coimbatore, *January 2018 – January 2022*

- First Class with Distinction | CGPA: 9.22

HSC (Biology) | Krishnasamy Matriculation Memorial Higher Secondary School, 2016 – 2018

- Percentage – 92%

SSLC | Krishnasamy Matriculation Memorial Higher Secondary School, 2016

- Percentage – 98%

Skills

Category	Technologies/Tools
Cloud Platforms	AWS
Containerization & Orchestration	Docker, Amazon ECS
Infrastructure as Code (IaC)	Terraform, Ansible
CI/CD & DevSecOps	Jenkins, Git
Scripting & Automation	Bash, Python
Monitoring & Logging	Datadog, ELK Stack
Operating Systems	Linux
Methodologies	Agile, Virtualization

Languages

- **Tamil**: Advanced
- **English**: Proficient

Awards & Recognitions

- **India DevOps Hackathon Winner (1st Place)** – Bangalore, 2024: Recognized for ADF-Devbox project, excelling in cost reduction, automation, and scalable DevOps innovation.
